

UP & DOWN

TV20VMB

20 MM VENETIAN BLIND

design your sunlight

Innovation, design, quality. These are the values on which, for the last thirty years, the world of Sunbell has firmly founded its business by developing cutting-edge solutions that are strictly Made in Italy for managing the lighting levels of any environment. Exclusive technical double-glazing blind systems combined with cutting-edge solutions applied to the products outside the glass, enable lighting levels to be adjusted as required for each and every situation, creating the perfect ambience. Linear design, research into materials and fabrics and the study of increasingly innovative products with European patents combine seamlessly with the craftsmanship that is put into creating each and every product, which constitute a unique symbol of superior Italian quality throughout the world. Sunbell's blinds are elegant furnishing accessories that can be used to create the perfect level of lighting required; villas and apartments, offices and retail space, residences and hotels, hospitals and health care facilities, schools and public buildings are just some of the places in which Sunbell products can be used.

Flexibility and a personalised, customer-oriented focus complete the profile of an innovative company with strong roots, which looks towards the future, guaranteeing the quality of each and every product and ensuring excellent results.

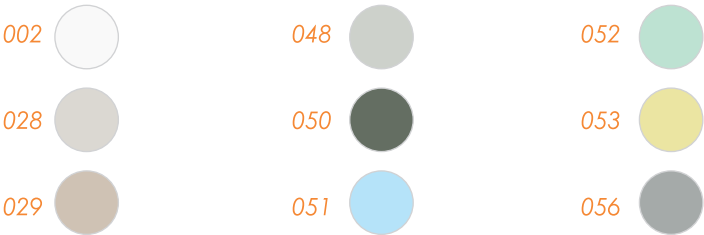

UP&DOWN

The first and only European-patented rechargeable battery-operated system with wireless magnetic actuator and electronics outside the glass unit, Up & Down is the perfect fusion of design and functionality. Pleasing to the eye, it does not require an electrical system and can be applied to any thickness of glass. The lithium batteries ensure increased duration compared to those currently available on the market. It is also possible to fit an internal or external photovoltaic panel to the glass to assist with recharging.

Exclusively designed to satisfy the needs of the British market, The New 20 mm blind is ideal for renovation of existing windows.
